

or some arrangement for the construction and distribution of water from some source. But as I read it, it's not a rural water district or any public entity. Now when you read through the bylaws then, the only obligation, the only obligation that members have and, by the way, they don't have to accept Game and Parks as a member as I read it, but the only obligation that members have is to pay annual dues and the annual dues will be determined according to the number of outlets being served by the water pipeline. So there is no obligation to make repairs to the pipeline, but I was kind of looking for some indication of what kind of a system this is and how much the annual repairs or potential future repairs might be. It occurs to me that this particular sentence doesn't really obligate Game and Parks to do anything because the bylaws don't say anything other than you're going to pay annual dues for the water that you use. Can you give us some idea of what kind of an obligation Game and Parks might be taking on should they make some kind of additional agreement to make pipeline repairs? Can either...were either of you given information from the parties involved as to what this obligation might be? Senator Johnson.

SENATOR R. JOHNSON: Senator Beutler, to answer your question specifically, I was not given any information as to what obligation the Game and Parks would take on. I'm assuming that they would act as a good neighbor in repairing the pipeline if it should have need for repair, as anyone would, but as far as what obligations they might take on, I'm unfamiliar with the actual distribution system. Possibly Senator Lamb who represents that district might have a better knowledge of how that pipeline works.

SENATOR BEUTLER: Is it your assumption, Senator Johnson, that if they are accepted for membership in this organization that they would be obligated to accept membership into this organization?

SENATOR R. JOHNSON: Senator Beutler, I can't answer that. I don't know.

SENATOR BEUTLER: Okay. Senator Lamb.

SENATOR LAMB: I know very little beyond what I have already stated that there is something like eight hydrants, as I understand it, that are connected to this line. There is a well to the north and the pipeline starts there and then that is what
